

Power-Package for ventilators

RRC offers ready-to-use solutions for new product developments.

There is currently a shortage of ventilators worldwide, so even companies from other industries are looking to provide manufacturing to meet the necessary demand. In order to drive new product developments in the shortest possible time, RRC power solutions now offers an immediately available solution for the necessary portable power supply: the Power-Package for ventilators.

The Package provides several benefits:

As the contained RRC standard batteries are approved worldwide, they are usable everywhere in the world. Many well-known medical device manufacturers already rely on the RRC standard battery packs.

Normally it takes several years to develop a medical device and find the right portable power supply, RRC standard batteries can be used without additional development time and costs. Furthermore the batteries are developed and tested to the highest standards (ISO13485 + FDA QS.Reg 820) and provide a high performance.

"After the beginning of the Covid-19 pandemic and the urgent requests from our customers, we have done everything to prioritize and increase the production capacities of these products in all our factories" says Gerhard Ruffing, CEO of RRC power solutions GmbH.

RRC already delivers the majority of ventilator batteries to manufacturers worldwide and the demand of these customers has multiplied in recent days. It turns out that the high demand does not only concern ventilators, but also many product-related medical devices, such as CPAP devices or medical beds.

"At the moment we are fully committed to supplying our customers with our products quickly and therefore doing our part to help contain and manage the Corona pandemic," said Gerhard Ruffing. "But we also want to support those who are now advancing new developments for the treatment of CoVid-19 patients. That's the reason for the Power-Package now."

In addition to the matching RRC standard battery, the data package also includes complete data to design-in the products as well as optional charging infrastructure. In addition RRC has its own application support team, which is always available for advice and assistance.

All those who are now looking for a fast and future-proof solution in the field of portable power supply and require the Power-Package for their application can contact the company directly at info@texim-europe.com

About RRC power solutions

RRC power solutions stands for high reliability and innovative technology in the field of mobile energy. Founded by students in 1989 the company evolved from being a computer accessory manufacturer, to a supplier of custom power solutions, to the leading manufacturer of standard energy storage solutions. From a start-up at the end of the 80s, became a multinational company, which sets new standards in the market as a leading manufacturer of batteries and battery chargers in demanding industrial sectors.

The special competence of RRC is the development of power solutions according to the specific requirements of our customers. RRC offers both standardized as well as customized solutions for professional applications. RRC batteries and chargers provide numerous benefits and have all approvals that are required for worldwide market use. In addition, the company ensures with a guaranteed product availability of 10+ years. It is no coincidence that numerous well-known customers from the medical, military and industrial sectors rely on RRC's expertise.
