Change Description [Beschreibung der Änderung]

1. Improvement of User Experience

It has been reported that the calibration requested by the battery interferes with the usability of the battery, as the calibration process takes up to 39 hours and cannot be interrupted. Under normal use, battery calibration is generally not necessary to ensure the long life of RRC standard batteries. Therefore, the calibration function has been removed.

2. Improvement of Hardware / Bug Fix

In rare cases, an unsuccessful charging completion was signaled even though charging was successfully completed. The improvement has resolved this issue.

Identification of Change [Erkennen der Änderung]

Traceability is ensured by revision step (110111-05), see device label and packaging label.

Impact on Quality and / or Reliability [Auswirkungen auf die Qualität bzw. die Zuverlässigkeit]

Improvement of quality and reliability. The battery charger is fully compatible with former revisions.

Products with changes (P/N: 110111-05) will be available from the end of Q3 2024.	N/A		N/A

*: The estimated implementation Date is the forecasted date that a customer may expect to receive the changed product. This is determined by the estimated date of inventory depletion on the Product Change Notification (CN) issue date. This may be affected by fluctuation in supply and demand. Consequently, although customers should be prepared to receive changed product on this date, RRC will continue to ship pre-changed product until a time in which inventory has been depleted. This may result in pre-changed product shipped to customers after this forecast date.
