2.Precautions in use of LCD Modules

(1)Avoid applying excessive shocks to the module or making any alterations or modifications to it.

(2)Don't make extra holes on the printed circuit board, modify its shape or change the components of LCD module.

(3)Don't disassemble the LCM.

(4)Don't operate it above the absolute maximum rating.

(5)Don't drop, bend or twist LCM.

(6)Soldering: only to the I/O terminals.

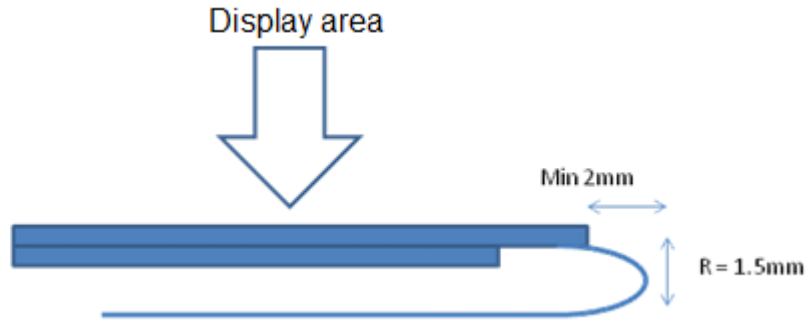
(7)Storage: please storage in anti-static electricity container and clean environment.

(8) Winstar have the right to change the passive components, including R3,R6 & backlight adjust resistors. (Resistors,capacitors and other passive components will have different appearance and color caused by the different supplier.)

(9)Winstar have the right to change the PCB Rev. (In order to satisfy the supplying stability, management optimization and the best product performance...etc, under the premise of not affecting the electrical characteristics and external dimensions, Winstar have the right to modify the version.)

(10) To ensure the stability of the display screen, please apply screen saver after showing 30 mins of fixed display content.

(11) The limitation of FPC bending



(12)Please heat up a little the tape sticking on the components when removing it; otherwise the components might be damaged.

7.Interface Pin Function

Pin No.	Symbol	Level	Description
1	NC		No connection
2	FR	O	This is the liquid crystal alternating current signal terminal.
3	CL	I/O	This is the display clock input terminal The following is true depending on the M/S and CLS status.
4	/DOF	O	This is the LCD blanking control terminal.
5	/CS1	I	This is the chip select signal. When /CS1 = "L" and CS2 = "H", then the chip Select becomes active, and data/command I/O is enabled.
6	CS2	I	
7	/RES	I	When /RES is set to "L", the register settings are initialized (cleared). The reset operation is performed by the /RES signal level.
8	A0	I	This is connect to the least significant bit of the normal MPU address bus, and it determines whether the data bits are data or command. A0 = "H": Indicates that D0 to D7 are display data. A0 = "L": Indicates that D0 to D7 are control data.
9	/WR	I	When connected to 8080 series MPU, this pin is treated as the "/WR" signal of the 8080 MPU and is LOW-active. The signals on the data bus are latched at the rising edge of the /WR signal. When connected to 6800 series MPU, this pin is treated as the "R/W" signal of the 6800 MPU and decides the access type : When R/W = "H": Read. When R/W = "L": Write.
10	/RD	I	When connected to 8080 series MPU, this pin is treated as the "/RD" signal of the 8080 MPU and is LOW-active. The data bus is in an output status when this signal is "L". When connected to 6800 series MPU, this pin is treated as the "E" signal of the 6800 MPU and is HIGH-active. This is the enable clock input terminal of the 6800 Series MPU.
11~18	DB0~DB7	I/O	Data bus
19	V_{DD}	P	Power supply
20	V_{SS}	P	Ground
21	Vout	O	DC/DC voltage converter. Connect a capacitor between this terminal and VSS or VDD
22	C3+	O	DC/DC voltage converter
23	C1-		

24	C1+		
25	C2+		
26	C2-		
27	V4	P	This is a multi-level power supply for the liquid crystal drive. The voltage Supply applied is determined by the liquid crystal cell, and is changed through the use of a resistive voltage divided or through changing the impedance using an op. amp. Voltage levels are determined based on Vss, and must maintain the relative magnitudes shown below. V0 ≧V1 ≧V2 ≧V3 ≧V4 ≧Vss
28	V3		
29	V2		
30	V1		
31	V0		
32	VR	I	Output voltage regulator terminal. Provides the voltage between VSS and V0 through a resistive voltage divider. IRS = "L" : the V0 voltage regulator internal resistors are not used. IRS = "H" : the V0 voltage regulator internal resistors are used.
33	C86	I	This is the MPU interface selection pin. C86 = "H" : 6800 Series MPU interface. C86 = "L" : 8080 Series MPU interface.
34	P/S	I	This pin configures the interface to be parallel mode or serial mode. P/S = "H" : Parallel data input/output. P/S = "L" : Serial data input. The following applies depending on the P/S status: P/S Data/Command Data Read/Write Serial Clock "H" A0 D0 to D7 /RD, /WR X "L" A0 SI (D7) Write only SCL (D6) When P/S = "L", D0 to D5 must be fixed to "H". /RD (E) and /WR (R/W) are fixed to either "H" or "L". The serial access mode does NOT support read operation.
35	NC		No connection
36	NC		No connection

Low Temperature Operation	Endurance test applying the electric stress under low temperature for a long time.	-20℃ 200hrs	1
High Temperature/ Humidity storage	The module should be allowed to stand at 60℃,90%RH max For 96hrs under no-load condition excluding the polarizer, Then taking it out and drying it at normal temperature.	60℃,90%RH 96hrs	1,2
Thermal shock resistance	The sample should be allowed stand the following 10 cycles of operation -20℃ 25℃ 70℃ 30min 5min 30min 1 cycle	-20℃/70℃ 10 cycles	— —
Vibration test	Endurance test applying the vibration during transportation and using.	Total fixed amplitude : 1.5mm Vibration Frequency : 10~55Hz One cycle 60 seconds to 3 directions of X,Y,Z for Each 15 minutes	3
Static electricity test	Endurance test applying the electric stress to the terminal.	VS=±600V(contact), ±800v(air), RS=330Ω CS=150pF 10 times	— —

Note1: No dew condensation to be observed.

Note2: The function test shall be conducted after 4 hours storage at the normal Temperature and humidity after remove from the test chamber.

Note3: The packing have to including into the vibration testing.

Note: A backlight driven by voltage will keep the drive current under the safe area (current between minimum and maximum).

If the B/L LED is driven by current only, the drive voltage cannot be considered as a reference value.

Note 1: Supply current minimum value is only for reference since LED brightness efficacy keeps enhancing. Current consumption becomes less and less to achieve the same luminance.

Note 2:50K hours is only an estimate for reference.

12.Material List of Components for RoHs

1. WINSTAR Display Co., Ltd hereby declares that all of or part of products (with the mark "#"in code), including, but not limited to, the LCM, accessories or packages, manufactured and/or delivered to your company (including your subsidiaries and affiliated company) directly or indirectly by our company (including our subsidiaries or affiliated companies) do not intentionally contain any of the substances listed in all applicable EU directives and regulations, including the following substances.

Above limited value is set up according to RoHS.										

2. For RoHS compliance, the recommended soldering temperatures for different components are as follows:

(1) FPC：300℃, 1-3 seconds

(2) Backlight AK and metal pin glass: 330℃, 1-5 seconds

Note: Customers should adjust the temperature and duration based on the actual materials used in their soldering process, including the soldering iron, solder paste, and any other components involved.

13.Recommendable Storage

1. Place the panel or module in the temperature 25°C±5°C and the humidity below 65% RH
2. Do not place the module near organics solvents or corrosive gases.
3. Do not crush, shake, or jolt the module.
